

IT & Security Policy

Northlight Analytics | Information Security Team | Version 2.4 | Effective January 2026

1. Device Requirements

- Company-issued laptops must be used for all work involving customer data.
- Full-disk encryption (FileVault / BitLocker) is enabled automatically via MDM enrollment.
- Personal devices may only access email and Slack through approved mobile apps with MDM profiles.

2. Account Security

- Multi-factor authentication (MFA) is mandatory on all company accounts, no exceptions.
- Passwords are managed through the company 1Password vault; reused passwords are not permitted.
- Access to production systems requires SSO login and is logged for audit purposes.

3. Network Requirements

Requirement	Detail
Home Wi-Fi	WPA2 or WPA3 encryption required, default router passwords must be changed
Public Wi-Fi	Company VPN required before accessing any internal tool
VPN Provider	Company-managed VPN client, auto-installed via MDM

4. Data Handling

- Customer data must never be stored on local drives; use approved cloud storage only.
- Screenshots or exports containing customer data must be deleted within 24 hours of use.
- Report any suspected data exposure to security@northlightanalytics.com within 1 hour of discovery.

5. Incident Reporting

If you suspect a phishing attempt, lost device, or unauthorized account access, report it immediately via the [#security-incidents](#) Slack channel or by emailing security@northlightanalytics.com. Do not attempt to investigate the issue yourself.

6. Approved Software

Only software listed in the IT Asset Catalog may be installed on company devices. Requests for new tools should be submitted through the [#it-requests](#) channel and are typically reviewed within 2 business days.

7. Offboarding

Upon departure, all company devices must be returned within 10 business days using the prepaid shipping label provided by IT. Account access is revoked on the employee's last working day at 11:59 PM in their local time zone.
